## Adaptive User Interfaces (AUI)

**Ziying Qi**

UX Design Intern

25/09/2024

## What is AUI?

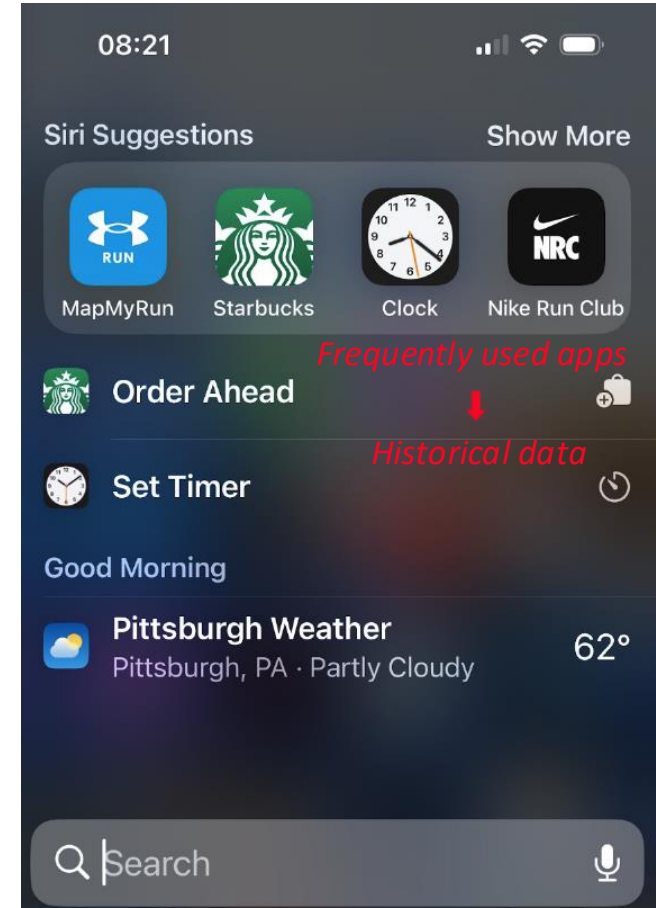

*“..... where AI, particularly **simple and low-risk AI technology**, can be leveraged to reduce user interactions and enhance the overall experience. At its core, an AUI predicts user needs based on their past behaviors and patterns, **automating repetitive or tedious tasks**. This minimizes the effort required from users while ensuring **they retain control over the system**.”<sup>1</sup>*

### **In this case:**

**Simple and low-risk AI:** Historical data(easy to catch and run)

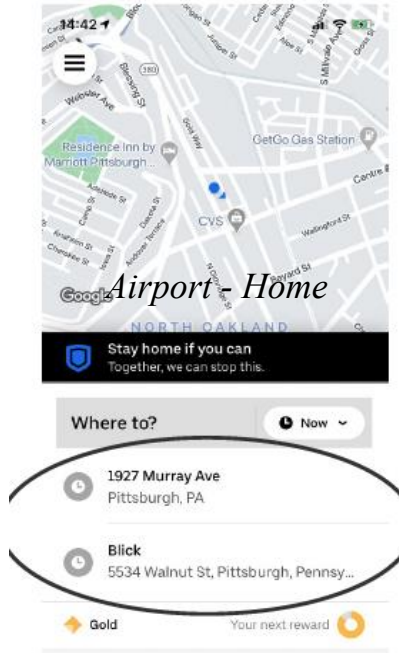

**Repetitive or tedious tasks:** Manual input to search for a frequently used app

**Retain control:** If wrong suggestions, still have the search bar, no extra steps

# More Examples on AUI

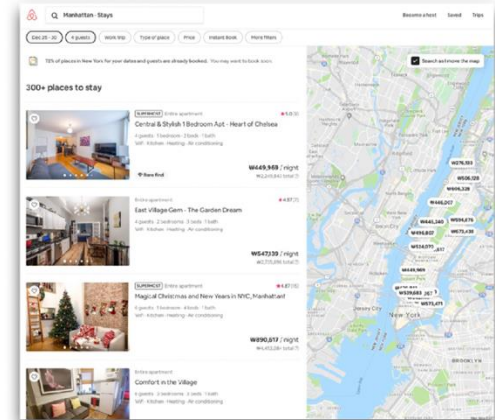

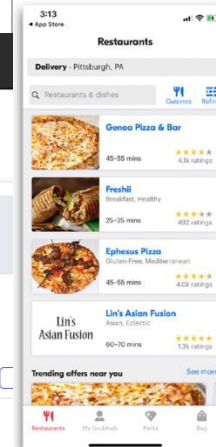

*ride-sharing app*

Where you go/Where you from/When you travel...etc.

Highlighting actionable entities  
Date(add on calendar)/phone(quick call)

# More Examples on AUI

## Auto-filling in forms

Automatically populating web forms with user information, reducing the need for repetitive data entry. (Destination auto-fill, quick reply, search bar recommendation etc.)

ride-sharing app

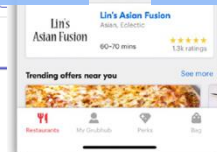

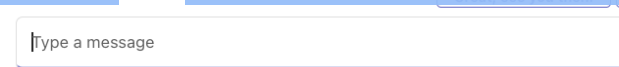

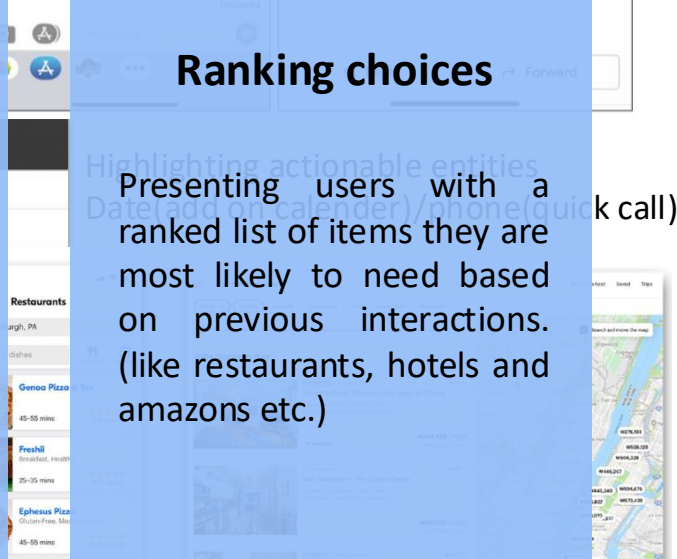

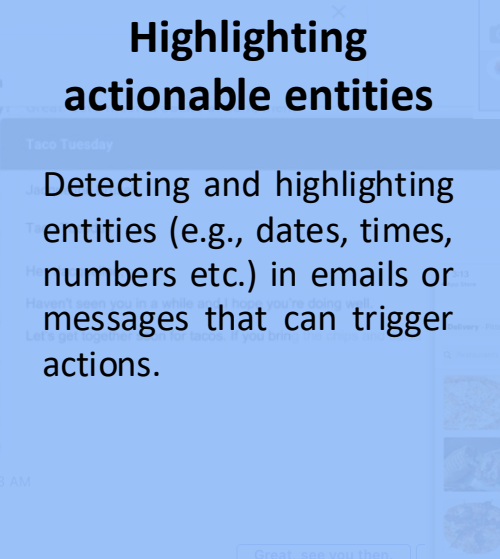

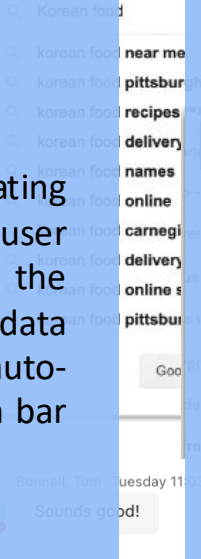

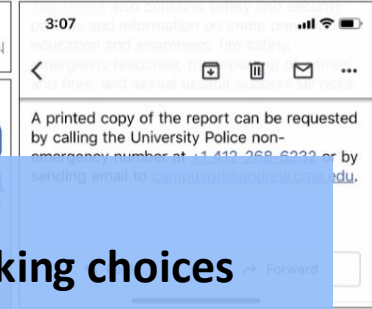

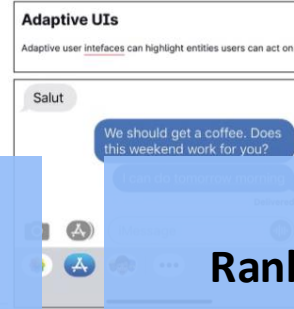

Where you go/Where you from/When you travel...etc.

## Highlighting actionable entities

Detecting and highlighting entities (e.g., dates, times, numbers etc.) in emails or messages that can trigger actions.

## Ranking choices

Presenting users with a ranked list of items they are most likely to need based on previous interactions. (like restaurants, hotels and amazons etc.)

## Bad AUI Example

### Personalized News Recommendations

Repeatedly recommends similar content based on past behavior, ignoring diverse or changing interests.

**Overly homogeneous recommendations**  
lead to "echo chambers."

**Fails to adapt** to short-term interests,  
continuing to push irrelevant

## The Dallas Morning News

### Robert Roberson, denied chance to testify at Capitol, relies on others to plead his case

Dr. Phil and author John Grisham say the death row inmate was not given a fair trial.

# Why is AI?

Gmail

*AUI is becoming more and more important in big companies cause user prefer personalized Experiences so much.<sup>1</sup>*

<sup>1</sup> The value of Personalization, McKinsey(2021)

## Why is AUI?

### Designers should learn to recognize AUI opportunities

*“We propose that UX designers are the right innovators to incorporate AUIs into enterprise apps. UX designers are uniquely positioned to recognize situations where an AUI might help because they view the world through the eyes of the user. They can anticipate situations that will occur frequently, impact a large number of users. However, UX designers receive no training on AUIs.”*

*“Innovation with AUIs takes place at design time, when development teams are creating new interfaces or performing a major overhaul of existing interfaces. They are different from many other AI innovation initiatives because the opportunity to use them is most easily recognized by UX designers.”*

## How to use AUI in enterprise?

*Recognize  
opportunity*

*UX designers first need to recognize situations where a user will likely do the same thing over and over again.*

*Qualify the  
benefit*

*AUIs work best for frequent tasks performed by lots of people. But they also make sense for workers whose time is really valuable. Professionals like **doctors** and lawyers, where the cost of each transaction is much higher.*

*Gather  
resources*

*Design teams should request access to telemetry data showing users' interactions with the system they wish to automate. Teams need to see if the data needed for the inference is available.*

*Estimate  
Cost*

*Estimate the time and cost for implementing the AUI and learn to recognize situations that will likely produce more value than cost and situations where this is less likely to be the case.*

*Construct  
details*

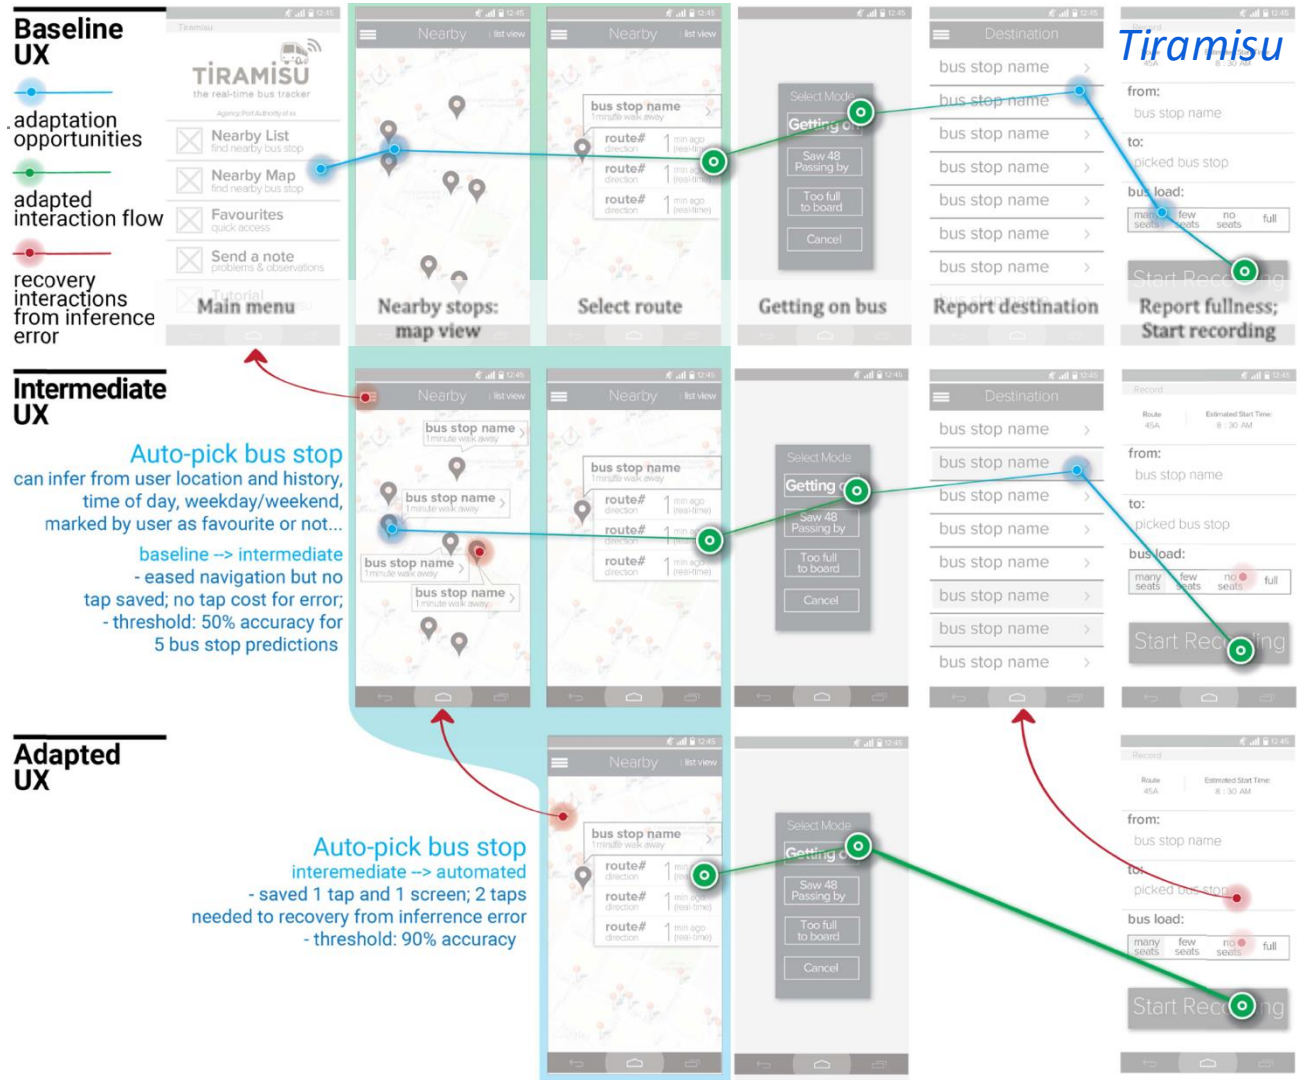

*Work out the details of the interaction, using wireframing, design patterns, and other tools to explore ways to present an AUI to a user.*

# Business Case

1. How to Recognize AUI opportunities ?
2. How to annotate the interaction flow?

Saved 4 taps and 3 screens.  
Over 90% accuracy

\*Low-risk AI don't need to be 100% accuracy.  
It's not harmful and easy to recover from it.

# Thank you!

(And go back to SR&C AUI opportunities!)
